

SUPPLEMENTARY MATERIAL

Interview questions

1. Can you describe your experiences with PIVC insertion during the clinical placement?
2. What would you say were the most helpful aspects of the placement, in terms of developing PIVC insertion skills?
3. How well did you feel that the clinical skills training progressed the knowledge that you had from the content you had previously covered? Can you explain why/why not?
4. On a scale of 1 to 10 (10 being the highest), where do you feel you are at right now with your knowledge, skills and confidence in PIVC insertion?
5. What do you feel you would need to do from here to improve your PIVC insertion skills?
6. What do you think other undergraduate dual degree students should know about hospital-based PIVC training as part of clinical placement?
7. Please share with us any recommendations that you can think would improve PIVC training for undergraduate students in the future?

Survey questions

1. Approximately how many PIVC insertions have you now performed as a registered nurse/midwife?
2. If you have been inserting PIVCs, what percentage would you say that you are successful with, on the first attempt?
3. To insert in your clinical employment, were you required to receive additional training or was the undergraduate training deemed enough?
4. What additional training did you receive in PIVC insertion, and what competency assessments did you complete, once you were registered?
5. On a scale of 1 to 10 (10 being the highest), where do you identify you are at right now with your knowledge, skills and confidence in PIVC insertion?
6. Thinking of your progress in PIVC insertion skills as a student, what worked well in terms of your education and training, and what could be improved?

7. What do you feel you would need to do from here to improve your PIVC insertion skills?
